Attorney Docket No.: 020144-003100US

1	FILM LAYER FOR DETECTION OF IMMOBILIZED ANALYTES
2	ABSTRACT OF THE DISCLOSURE
3	The present invention provides methods and apparatuses for detecting the
4	presence of immobilized molecular analytes. The invention uses a novel film layer
5	comprising a molecular ligand that is capable of diffusibly migrating to the immobilized
6	molecular analyte. A variety of detection methods are useful in detecting the resulting
7	detectable product.
